HYDROLOGICAL MEMORANDA, NO.37

MONTHLY AND ANNUAL AVERAGES OF RAINFALL FOR THE UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND FOR THE WORLD METEOROLOGICAL ORGANIZATION PERIOD, 1931 - 1960.

The standard period for averages used in the United Kingdom is the 35 years, 1916-1950, but for several reasons a survey has been carried out for the W.M.O. period of 30 years, 1931-1960. This Memorandum contains monthly and annual maps with isohyets in millimetres together with a selection of monthly and annual averages in inches and millimetres. A full survey has been carried out for Northern Ireland because the Republic of Ireland has officially adopted the W.M.O. period and many enquiries involve averages on either side of the border. The results are published in Hydrological Memorandum No. 35. Enquiries from W.M.O. culminating in the request for data and maps for the proposed "Climatic Atlas of Europe" have resulted in a Primary Survey of all stations with complete records for the 30 years, 1931-1960, for England, Wales, Scotland, the Isle of Man and the Channel Islands.[+] Some 1640 records were examined and the data tested and plotted on a series of maps. Some results were rejected but the majority were accepted and a network of 325 stations has been selected for publication in this Memorandum.

The maps will be reproduced in the "Climatic Atlas of Europe" which is being prepared under the auspices of the W.M.O. and U.N.E.S.C.O. and the isohyets have been drawn at the intervals recommended by W.M.O. in the "Guide to Climatological Practices", VII, 22. The arrangement of the stations in the table is that used in the United Kingdom, the basis being drainage areas, working clockwise round the coast of Great Britain from Northumberland. A similar plan is used for Northern Ireland.

E.H. ROWSELL
Meteorological Office, Met.O.8.

[+]For method see Hyd. Mem. No.5

TABLE OF MONTHLY AND ANNUAL AVERAGES OF RAINFALL FOR THE WMO, 30-YEAR PERIOD 1931-1960, (in and mm)

Station Altitudes. Altitudes in British units are given to the nearest ten feet and in metric units to the nearest metre. For this reason the two values for some stations are not strictly in agreement. Altitudes of stations in Northern Ireland are related to the Belfast mean sea level datum. The change to this from the Dublin Bay datum occurred on 1st January 1964.
